

BMB Dental Clinic

WHY USING CHEWIES ARE IMPORTANT:

1) ACCELERATED TREATMENT TIMES

By enhancing aligner fit and minimising aligner slippage orthodontic movements are fully expressed, thus reducing treatment times and the need for refinement.

2) ALIGNER SEATING

Chewies accurately seat your aligners for a truly intimate fit to improve tracking and predictability of your tooth movements.

3) INTRUSION ENHANCEMENT

Chewies assist your aligners/braces with the difficult movement of intruding your teeth.

4) RECAPTURE

Get your case back on track by using Chewies to encourage teeth to the predicted movement.

5) ORTHODONTIC ANALGESIC

Chewing on Chewies can provide pain relief as effectively as paracetamol or ibuprofen after adjustment of wires or new aligner insertion.

Make sure you:

Chew on Chewies every time you wear the aligners to make sure it is seated fully.

Chew on Chewies for at least 5 to 10 minutes a day to stimulate the teeth to move.
